

Global Green
Integrators

AZRC/APWA
2nd Annual
Conference
August 1 – 2, 2010

**DIVERSION TACTICS -
C&D AND
COMPOSTING**

Introduction

- **GGI specializes in helping clients divert recyclable material from the landfill**
- **Our specialty is the collection and disposal of food scraps from large clients**
- **Other services include event style recycling efforts such as the one you see at this event**
- **Business Intelligence information and metrics are provided to the client**

Composting – Food Scraps

- Worked with a company in town to understand the requirements of what material can be included in a compost pile
- Separation of proteins must occur prior to material being placed in the pile
- All other material can be included – starches, vegetables, fruits, sugar based products
- Significant Federal and City laws to comply with operating a compost process

Collection – Food Scraps

- **Collect food scraps from resorts and large food operations**
- **Material is stored in secured containers**
- **Containers are sent to “non – commercial” pig farms**
- **Food scraps are used as a supplement to the food supply by the farmer**
- **Containers are cleaned and returned for subsequent use**

Composting - Green Products

Having an event?

*Create a stir with
logoed bamboo sporks!*

Bamboo plates, sporks, utensils and serving trays are made from the leaves of the bamboo tree. They are made with sustainable harvesting/production methods and are easily compostable. We offer bamboo products with and without imprinting.

Composting - Green Products

Sugar Cane Paper or “Bagasse” is the fibrous residue left over after the sugar cane has been crushed and the sugar extracted. The bagasse is pulped and the fibers are woven to create our paper and tableware products.
